A MODERN SOLUTION FOR BEAUTIFUL SKIN

# INNO Pen

Reinventing The Face  
Of Microneedling

The world's safest and most advanced microneedling device perfected by the pioneer of dermal needling technology, **CRL - Clinical Resolution Lab, Inc.**

**InnoPen** is a medical precision tool with a unique, dual spring-loaded disposable needle cartridge (InnoTip) that uses an automated, vibrating stamp-like motion to cause micro-injuries to the skin. The gentle stimulation of fibroblasts promotes natural induction of collagen and elastin, without the stress of pain and lengthy downtime associated with ablative treatments. Microchannels, resulting from the needles piercing through the skin, aid in infusing therapeutic serums for greater penetration and enhancement of overall efficacy. InnoPen is an ideal choice for the non-surgical and non-ablative treatment of various skin conditions.

**InnoPen Helps:**

- Intensifies transdermal delivery for cosmetic, topical, and platelet-rich plasma (PRP) treatments
- Diminishes fine lines and wrinkles
- Improves skin tone and texture
- Minimizes stretch marks
- Effectively tightens, lifts, and thickens the skin
- Improves the appearance of scars (surgical, burns, acne vulgaris depressions)
- Reduces pore size
- Increases absorption of cosmeceutical solutions
- Delivers visible results that are safe and virtually painless with little to no downtime

**Why InnoPen?** InnoPen is engineered by the master minds of microneedling technology, designed to deliver consistent results, with features that display its superior USA made quality:

1. Patented high-speed motor with accurate speed and power control
2. Anti-overheating feature
3. Fully adjustable needle depth & speed
4. Ergonomic design for effortless handling

At the heart of InnoPen is its revolutionary, patented disposable needle cartridge called **InnoTip**. InnoTip is built with an innovative **Double Protective Tip System** that truly surpasses all limits. InnoTip delivers the safest method of microneedling treatment without the risks inherent in all competitors' automated microneedling pens/devices that use single-wall, open needle tip cartridges.

# INNO Tip™

Innovative Double Protective System

- Superior USA made quality
- Patented needle cartridge
- Enclosed needle tip design
  - Truly accurate penetration depth
  - Even distribution of pressure applied to needling area
- Dual clearance tip assurance
  - Requires perfect centering, precise spacing, and vertical line uniformity of all needles to pass through the enclosed outer tip openings and double walls

- On/Off needle motion control
  - No tearing of skin
  - No scratching with lateral movements

- Precise 90° vertical needle insertion & penetration
- No cross contamination
- Self-detection feature
  - InnoTip will not operate if any needle is bent or misaligned
- 100% contaminant free (y-gamma sterilization)
- All medical grade components
  - GE lexan polycarbonate resin plastic
  - SUS 316 surgical stainless steel needles

# Competitors' Needle Cartridge

**Competitors' Open Needle Tip**

- Warrants inaccuracy of needle penetration depth
  - Needles are inserted into the skin at uneven heights
  - Causes variance between desired depth vs. actual penetration achieved
- No on/off needle tip control
  - Causes surface scratching, as well as micro-tearing of deeper skin layers when dragged across the skin
- No self-detection of defective needles
- Competitors' open needle tip specifications
  - Off-centered, slightly slanted needle positions
  - Non-surgical grade needles and uneven needle lengths
- No proof of medical grade components
- Not safe enough to ensure 100% sterility
- Not made in the USA
- Poor packaging
